

Signature Performance Indexed Universal Life

A flexible premium universal life insurance policy
with both fixed and indexed interest crediting options.

American National Insurance Company

American National's Signature Performance!

- 
- Provides death benefit protection that might be vital to the well-being of your loved ones
 - Allows for a supplemental retirement income through accumulation value
 - Provides a tool to meet unexpected expenses by allowing withdrawals through a loan option

What is an Indexed Universal Life Policy?

An Indexed Universal Life Policy (IUL) is a type of permanent life insurance policy that provides a death benefit as well as the ability to build accumulation value.

This type of policy has the potential to earn interest based upon the performance of an index, which makes this an Indexed Universal Life Insurance Policy. This is a cash-accumulation-oriented product and is designed to maximize accumulation based on the growth of the S&P 500®.

However, you are never invested directly in the market, and your policy will never be credited a negative interest rate due to adverse market results. This allows you to take advantage of the potential increases in the index while maintaining a level of protection in the event that the index drops below 0%. However, due to monthly deductions to your policy, your accumulation value may decrease.

With an IUL policy, you have the flexibility to adjust the amount of premiums you contribute. Eventually, you may stop contributing premiums if you accumulate enough cash value to cover the cost to keep the policy active. If your accumulation value is sufficient, you may also be able to access some of your accumulation later in life through policy loans.¹

1. Policy loans are subject to interest charges and can reduce the death benefit paid to beneficiaries.

To Provide for Those You Love...

How can Signature Performance Indexed Universal Life be used?

- Provides death benefit protection that may be used to replace income, pay off the mortgage or help pay for college.
- Allows you to choose from several options for earning interest on your account value. At American National, we have one fixed option, and four additional options which are tied to a stock market index.
- You have a choice in the death benefit; choose between a lump sum or periodic payments.
- The Signature Performance Indexed Universal Life insurance policy provides potential accumulation, which is then available to supplement retirement income through policy loans after you retire.
- Life insurance offers one of the few opportunities—outside of qualified plans—that individuals have to enjoy tax-deferred accumulation² over a lifetime.

Interest Crediting

Signature Performance IUL has five types of interest crediting strategies, a fixed account and multiple indexed interest-crediting strategies.

When a policy is applied for, allocations are chosen for each of the strategies. A percentage of premiums may be allocated to any of the available interest crediting strategies.

Fixed Account:

The fixed account will earn interest at a rate periodically determined by the company. Interest is calculated using a compound method assuming a 365-day year. The rate credited to the fixed account will never be less than the minimum guaranteed interest rate for the policy.

Interest is credited at an annual effective interest rate. Any surrenders will reduce the amount of interest credited to your policy.

Hypothetical Fixed Example:

Crediting Rate:	4%
Beginning Value:	\$10,000
Ending Value:	$\$10,000 * (1 + .04) = \$10,400$
Net Rate of Return:	$\$10,400 / \$10,000 - 1 = 4\%$

The Indexed Element

An “index” is a financial measure of movement in the market. Signature Performance Indexed Universal Life uses the changes in the S&P 500® Index¹ to determine interest earnings for indexed crediting strategies.

Interest Credited Based Upon Movement of an Index

The key to indexing is that no money is directly in the underlying index, the stock market, or any equity. Instead, the movements of the index from one period to another are tracked and used as the basis for crediting interest.

There is the potential to have a higher amount of interest credited to an indexed strategy than would be credited to the fixed account.

The interest credited would be zero, but would never go below zero.

How to tell if an index has increased or decreased:

To calculate the hypothetical change in an index directly from one point in time to another point in time (called Point-to-Point), compare (A) the initial value at the start of the index to (B) the ending value of the index.

On Start Date A, the index closed at 1000

On End Date B, the index closed at 1100

The difference from Start Date to End Date is: $(1100/1000) - 1 = 10\%$

Therefore, the index from Start Date to End Date increased by 10%

1. The S&P 500® or Standard & Poor's 500 Index is a market-capitalization-weighted index of the 500 largest U.S. publicly traded companies.

Indexed Interest Crediting Definitions

Segment

Each time an amount is transferred from the Sweep Account into an Indexed Strategy, a unique segment is created for that amount.

Segment Start Date

The first day a segment is active.

Segment Maturity Date

The last day a segment is active.

Segment Asset Charge

A charge that will apply to the policy based on the indexed strategy and is assessed on the segment start date.

Change in the Index

On the segment maturity date, the closing value of the index is compared to the value from the segment start date. The difference in the value of the index from the segment start date to the segment maturity date is measured as a percentage known as the change in the index.

One Year Point-to-Point

Each segment has a term of one year. Interest is calculated and credited on each segment when it matures at the end of one year. No interest is credited to the segment prior to the segment maturity date. Any

amount deducted from a segment prior to its segment maturity date will not earn any interest, pro rata or otherwise, for that segment term, except in the event of the death of the insured.

Cap

The maximum interest rate to be credited and declared for each applicable segment when it is created. The cap can be different for each segment.

Floor

The minimum interest rate to be credited to each segment. The floor may be different for different strategies. The minimum floor is 0%.

Multiplier

A multiplier applies an enhanced rate of return to any positive S&P 500® return for a given multiplier segment. There is an additional charge for each multiplier that is subtracted from the segment when it begins. The amount of the multiplier will not change during the life of the policy.

Interest Rate Spread

This is an interest rate used in the point-to-point uncapped with interest rate spread strategy. This rate is specified by American National, at the beginning of each segment and will reduce the amount to be credited to the segment by the amount of the spread.

There is not one particular interest crediting strategy that will deliver the most interest under all economic conditions. The interest credited excludes any dividends generated by the specific stocks in the S&P 500® Index because your premium payments are not invested in the S&P 500® Index. The indexed strategies provide the opportunity for potential increase in the interest earnings that may be greater than those in the Fixed Account. American National and its agents do not make any recommendations regarding the selection of indexed strategies. American National and its agents do not guarantee the performance of any indexed strategies.

Value Cap

(Point-to-Point with 0% Floor)

Hypothetical Value Cap Examples:

30% Increase in the Index

Cap 9.5% (0% Floor)

Annual S&P® Growth 30%

Crediting Rate 9.5%

Beginning Value \$10,000

Ending Value $\$10,000 * (1 + .095) = \$10,950$

Net Rate of Return: $\$10,950 / \$10,000 - 1 = 9.50\%$

10% Decrease in the Index

Cap 9.5% (0% Floor)

Annual S&P® Growth -10%

Crediting Rate 0%

Beginning Value \$10,000

Ending Value $\$10,000 * (1 + 0) = \$10,000$

Net Rate of Return: $\$10,000 / \$10,000 - 1 = 0\%$

This strategy compares the value of the S&P 500® Index at the beginning of the one-year segment term to the value at the end of the one year period and measures the percentage of increase or decrease. Interest is credited based on the percentage change subject to the declared rate cap.

Uncapped

(with Interest Spread and 0% Floor)

Hypothetical Uncapped Example:

30% Increase in the Index

Cap	Uncapped
Interest Rate Spread	4.75%
Annual S&P® Growth	30%
Crediting Rate	$30\% - 4.75\% = 25.25\%$
Beginning Value	\$10,000
Ending Value	$\$10,000 * (1 + .2525) = \$12,525$
Net Rate of Return:	$\$12,525 / \$10,000 - 1 = 25.25\%$

This strategy also compares the value of the S&P 500® Index at the beginning of the one-year segment term to the value at the end of the one-year segment term. This strategy measures the percentage of increase or decrease. Interest is credited based on the percentage change minus the interest rate spread.

Uncapped

(with Interest Spread and 0% Floor)

Hypothetical Uncapped Example:

30% Decrease in the Index

Cap	Uncapped
Interest Rate Spread	4.5%
Annual S&P® Growth	-30%
Crediting Rate	0%
Beginning Value	\$10,000
Ending Value	$\$10,000 * (1 + 0) = \$10,000$
Net Rate of Return:	$\$10,000 / \$10,000 - 1 = 0\%$

The diagram shows a horizontal number line with an arrow pointing to the right. A tick mark is labeled '-30%' on the left side. Another tick mark is labeled '0%' on the right side, and this '0%' tick mark is enclosed in a red rectangular box.

This strategy also compares the value of the S&P 500® Index at the beginning of the one-year segment term to the value at the end of the one-year segment term. This strategy measures the percentage of increase or decrease. This strategy measures the percentage of increase or decrease. Interest is credited based on the percentage change minus the interest rate spread.

Introduction to Multiplier Strategies

The Signature Performance Indexed Universal Life introduces two new crediting strategies, Multiplier and Multiplier Plus. Both provide an enhanced interest credit by multiplying the crediting rate in segment years where there is an increase in the index. During segment years where the index decreases, the crediting rate has a zero percent floor and the multiplier does not apply. The multiplier crediting strategies both have a segment asset charge which is applied at the segment asset charge regardless of whether the market increases or decreases.

The multiplier crediting strategies both have the same interest rate cap. The Multiplier crediting strategy has a lower Multiplier and a lower segment asset charge than the Multiplier Plus strategy. American National reserves the right to change the interest rate cap and the segment asset charge but will not change the multiplier once the policy has been issued.

Hypothetical Multiplier Plus Example (Positive):

The Multiplier Plus example below shows the effect of a 10% gain in the S&P 500®. With a 12% cap, the full 10% increase in the one-year segment can be applied. Adding in the 60% multiplier brings the percentage to 16% which is then applied to the (\$10,000 minus the \$365 fee) \$9,635 ($9,635 \times 16\%$). This results in a total end of segment value of \$11,177.

Cap	12% (0% Floor)	
Multiplier	60%	
Segment Asset Charge	3.65%	
Annual S&P Growth	10%	
Crediting Rate	$10\% * (1 + .60) = 16.0\%$	
Beginning Value	\$10,000	
Ending Value	$\$10,000 * (1 - .0365) * (1 + .16) = \$11,177$	
Net Rate of Return:	$\$11,177 / \$10,000 - 1 = 11.77\%$	

Multipliers

Hypothetical Multiplier Example (Negative):

The Multiplier example below demonstrates the effect of a negative return of -10% in the S&P 500®. Although there is no loss of principal due to the decline in the market, there is a 1.90% reduction in the value of the money going into the 24% Multiplier strategy due to the fee. Because of the Multiplier fee, in a negative market the account will go from \$10,000 to \$9,810.

Cap	12% (0% Floor)
Multiplier	24%
Segment Asset Charge	1.90%
Annual S&P® Growth	-10%
Crediting Rate	$0\% * (1 + .24) = 0\%$
Beginning Value	\$10,000
Ending Value	$\$10,000 * (1 - .019) * (1 + 0) = \$9,810$
Net Rate of Return:	$\$9,810 / \$10,000 - 1 = -1.90\%$

Multipliers

Hypothetical Multiplier Plus Example (Positive):

In the Multiplier Plus example below the S&P 500® goes up 30% during the one-year segment period. We then apply the cap of 12% which limits the return. We then apply the Multiplier of 60% to the 12% return which then increases the return to 19.2%. We then reduce the allocation amount by the multiplier fee of 3.65% which equals \$9,635 and multiply that times 1.192 which equals \$11,485 for a 14.85% return on the \$10,000 allocation.

Cap	12% (0% Floor)
Multiplier	60%
Segment Asset Charge	3.65%
Annual S&P Growth	30%
Crediting Rate	$12\% * (1 + .60) = 19.2\%$
Beginning Value	\$10,000
Ending Value	$\$10,000 * (1 - .0365) * (1 + .192) = \$11,485$
Net Rate of Return:	$\$11,485 / \$10,000 - 1 = 14.85\%$

S&P 500® 20-Year Lookback

The following chart illustrates the effect the actual historical movement of the S&P 500® Index, and how the specific indexed strategies would have performed from January 1, 1999 had the policy been available.

Year	S&P Return	Fixed	Value	Multiplier	Multiplier Plus	Uncapped
1999	19.53%	4.00%	9.50%	12.70%	14.85%	14.78%
2000	-10.14%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2001	-13.04%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2002	-23.37%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2003	26.38%	4.00%	9.50%	12.70%	14.85%	21.63%
2004	8.99%	4.00%	8.99%	9.04%	10.21%	4.24%
2005	3.00%	4.00%	3.00%	1.75%	0.97%	0.00%
2006	13.62%	4.00%	9.50%	12.70%	14.85%	8.87%
2007	3.53%	4.00%	3.53%	2.39%	1.79%	0.00%
2008	-38.49%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2009	23.45%	4.00%	9.50%	12.70%	14.85%	18.70%
2010	12.78%	4.00%	9.50%	12.70%	14.85%	8.03%
2011	0.00%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2012	13.41%	4.00%	9.50%	12.70%	14.85%	8.66%
2013	29.60%	4.00%	9.50%	12.70%	14.85%	24.85%
2014	11.39%	4.00%	9.50%	11.96%	13.91%	6.64%
2015	-0.73%	4.00%	0.00%	-1.90%	-3.65%	0.00%
2016	9.54%	4.00%	9.50%	9.70%	11.06%	4.79%
2017	19.42%	4.00%	9.50%	12.70%	14.85%	14.67%
2018	-6.24%	4.00%	0.00%	-1.90%	-3.65%	0.00%
AVG	5.13%	4.00%	5.53%	6.16%	6.56%	6.79%

This hypothetical example is intended solely for illustrative purposes and is not an indication of the policy's future performance. The S&P 500® Index does not reflect dividends paid on the stocks underlying the Index. Past performance of the index is no guarantee of future results. This chart assumes a declared rate cap of 9.5% for the Value option, an interest rate spread of 4.75% for the Uncapped option. For both Multiplier options there is a 12% cap, a segment asset charge of 1.90%, a multiplier of 24% for the Multiplier option, a segment asset charge of 3.65%, and a multiplier of 60% for the Multiplier Plus options for all years. The returns assume no policy loans or surrenders during the time period. The product's rate cap, interest rate spread, and segment asset charge will likely vary from year-to-year. There is not one specific interest crediting strategy that will deliver the most interest under all economic conditions.⁴ Other assumptions could produce significantly different results.

Features

Cumulative Interest Guarantee

At full surrender or the insured's death, the accumulation value will not be less than if all net premiums³ had been allocated to the fixed account with 2.0% interest credited throughout the life of the policy.

Flexible Loan Options for Unexpected Financial Needs

Should there be an unexpected financial need, the policy surrender value may be borrowed against at a competitive rate. Signature Performance Indexed Universal Life offers both fixed and variable loan options. At times, the economic environment may be more conducive to one loan option than the other. The policy includes the option to switch between the fixed and variable loan options once a policy year, with a maximum of five switches allowed over the lifetime of the policy. If multiple loans are taken on a policy, all loans must use the same loan option.

Policy loans are subject to interest charges and can reduce the death benefit paid to beneficiaries. While loans need not be repaid, outstanding loans may affect the policy's death benefit, the value of the policy, and possibly, the length of time the policy remains in force.

Riders

For Critical, Chronic, and Terminal Illness:

Accelerated benefit riders allow for a partial or full death benefit to be accelerated in the event of a qualifying condition. The payment is an unrestricted cash benefit that can be used for any purpose. Policy Form Series: ABR14-TM; ABR14-CT; ABR14-CH.

Disability Waiver of Premium

Will credit the minimum premium amount to the policy's accumulation value on a monthly basis, due after "total disability" begins and while it continues. Policy Form Series ULDW91.

Disability Waiver of Stipulated Premium

Will credit the stipulated premium amount to the policy's accumulation value on a monthly basis, due after "total disability" begins and while it continues. Policy Form Series PWSTP.

Children's Level Term Rider

Provides level term insurance on each insured child to the Insured child's attained age of 25 or the policy anniversary immediately following the Insured's attained age of 65, whichever comes first. Policy Form Series: ULCTR14

Guaranteed Increase Option Rider

Provides the right to increase the specified face amount on the base Universal Life policy, without evidence of insurability, on each major life event. Policy Form Series ULGIO14 (Not Available on Signature Performance IUL Unisex).

Overloan Protection Rider

Can keep a policy with a large amount of debt from lapsing (some restrictions apply). Policy Form Series ULOPR14.

Additional information on all these Riders can be found in the Benefits and Riders Guide, Form 10695. Forms may vary by state. Restrictions and Limitations may apply. Not all Riders are available in all states, and there may be additional cost for the Riders.

1. Policy Loans are subject to interest charges and can reduce the death benefit paid to beneficiaries. Outstanding policy loans may affect the policy's death benefit, the value of the policy, and, possibly, the length of time the policy remains in force.
2. Neither American National nor its agents offer tax or legal advice. You should consult your own tax and legal advisors.
3. "Net Premiums" are all premiums paid, including planned, periodic premiums and any unscheduled additional premiums, minus premium charges.

Disclosures and Product Summary

Important Considerations

This brochure contains only a general description of the product and is not a policy of insurance. Any coverage is subject to the terms and conditions of the policy itself. For full details, see the policy.

Expenses, cost of insurance, and interest credited are all explained in your policy. In addition, you will receive a detailed annual report showing all the transactions which occurred in your policy during the year, including the beginning Accumulation Value, premiums paid, expense charges, cost of insurance deducted, interest credited, any loans taken during the policy year, and the ending balance.

The Signature Performance Indexed Universal Life Insurance policy is not a registered security or stock market investment and does not directly participate in any stock or equity investments or index. When you buy this policy, you are not buying an ownership interest in any stock or index. American National and its agents do not make any recommendations regarding the selection of indexed strategies. American National and its agents do not guarantee the performance of any indexed strategies. There is not one particular interest crediting strategy that will deliver the most interest under all economic conditions. The S&P 500® Index is a product of S&P Dow Jones Indices LLC ("SPDJI") and has been licensed for use by American National Insurance Company and American National Life Insurance Company of New York. S&P® and S&P 500® are registered trademarks of Standard & Poor's Financial Services LLC ("S&P"). Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones") and these trademarks have been licensed for use by SPDJI and sublicensed for certain purposes by American National. American National's products are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, S&P®, their respective affiliates, and none of such parties make any representation regarding the advisability of investing in such product(s) nor do they have any liability for any errors, omissions, or interruptions of the S&P 500® Index.

Proceeds from life insurance paid because of the death of the insured are generally excludable from the beneficiary's gross income for tax purposes. (IRC 101(a)(1)) You should consult your tax advisor or attorney regarding your specific situation. Only through a general review of your specific situation can it be determined if there are tax advantages available to you through American National's products, one of which is life insurance. Neither American National nor its representatives provide legal or tax advice. Please consult your attorney or tax advisor regarding specific circumstances. Policy Form Series: IUL19 (Forms May Vary by State).

Accelerated Benefit Rider Notice:

Have your agent refer to rider forms for a complete list of illnesses and definitions. Some states may limit the definition of terminal illness to conditions that are expected to result in death within 12 months. The riders are offered at no additional premium. However, the accelerated payment will be less than the requested death benefit because it will be reduced by an actuarial discount and an administrative fee of up to \$500. The amount of the reduction is primarily dependent on American National's determination of the insured's life expectancy at the time of election. Outstanding Policy Loans will reduce the amount of the benefit payment. The accelerated death benefit is an unrestricted cash payment. A request for an accelerated death benefit may only be beneficial if the qualifying event results in significant deterioration of the rider insured's life expectancy. The Chronic and Terminal rider are intended to receive favorable tax treatment under 101(g) of the IRC. Receipt of a benefit could be a taxable event. You should consult a tax advisor regarding the tax status of any benefit paid under these riders. Receipt of Accelerated Benefits may affect your eligibility for Medicaid, supplemental security income, or other governmental benefits or entitlements. Before accelerating any benefit, you should consult an advisor to determine the impact on your eligibility. Accelerated Benefit Riders are not replacements for Long Term Care Insurance. This is a life insurance benefit that also gives you the option to accelerate some or all of the death benefit in the event that you meet the criteria for a qualifying event described in the policy. This policy or certificate does not provide long-term care insurance subject to California long-term care insurance law. The policy or certificate is not a California Partnership for Long-Term Care program policy. This policy or certificate is not a Medicare supplement policy. Accelerated benefit riders ("ABR") and long-term care insurance ("LTCI") provide different types of benefits. An ABR allows the insured to access a portion of the life insurance policy's death benefit while living and may be used for any purpose. LTCI provides reimbursement for necessary care received due to the inability to perform activities of daily living or cognitive impairment. Coverage may include reimbursement for the cost of a nursing home, assisted living, home health care, homemaker services, adult day care, hospice services, or respite care for the primary caretaker. The benefits may be conditioned on certain requirements or meeting an elimination period or limited by type of service, the number of days, or a maximum dollar limit. Benefits under some ABRs and all LTCI are conditioned upon the insured not being able to perform two or more of the activities of daily living or being cognitively impaired. California: See form 10741-CM for a more detailed comparison of benefits provided by an ABR and LTCI.
